Compressed gas cylinder

Description: Air Liquide has introduced Minitop, a compressed gas cylinder with an integrated regulator-valve, which is a portable ready-to-use version of its industrial-sized Altop cylinder. Light (10 kg), ergonomic, easy to handle and safe, Minitop is also economical to use. Its solid tulip cap, which is made of highly resistant, non-corrosive composite materials, totally protects the cylinder's regulator-valve at all times. The design of each component also includes exclusive safety features.

Company: Air Liquide Canada
